

BINARY

There are only
10
types of people
in this world
Those who understand
BINARY
and those who don't

0

4_{10}

6₁₀

22_{10}

2070₁₀

HOW TO REPRESENT NEGATIVE NUMBERS?

People have tried many things:

1. Using the most significant bit (MSB) as the sign bit: Sign-Magnitude

- $0101 = +5_{10}$
- $1101 = -5_{10}$

2. Inverting all bits: 1's Complement

- $0101 = +5_{10}$
- $1010 = -5_{10}$

3. Etc.

4. To explain, we need the concept of modular arithmetic

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

MODULAR ARITHMETIC IS LIKE A CLOCK.

Now you try: What is $3+7 \text{ MOD } 8$?

$$\begin{array}{rcl} & 0 & 1 & 1 & = 3_{10} \\ + & 1 & 1 & 1 & = 7_{10} \\ \hline & 1 & 0 & 1 & 0 & = 10_{10} \\ \text{MOD } 8: & 0 & 1 & 0 & = 2_{10}!!! \end{array}$$

7 is a **NEGATIVE NUMBER**
in MOD8 arithmetic!!!

2'S COMPLEMENT

To Convert a Positive Number into its 2's Complement (Negative):

1. Invert all bits in the target number
2. Add 1

$$\begin{array}{r} 2_{10} \quad 0 \ 1 \ 0 \\ \quad \downarrow \\ \quad 1 \ 0 \ 1 \\ \quad + \quad 1 \\ \hline -2_{10} \quad 1 \ 1 \ 0 \end{array}$$

MODULAR ARITHMETIC IS LIKE A CLOCK.

2's Complement works because we are reflecting across the line that separates positive numbers from negative numbers.

2'S COMPLEMENT: EXAMPLE W/ MOD 2^{16} ARITH

D	8	7	E
1101	1000	0111	1110

Is this number
negative or positive?

Negative! Because
MSB = 1

One's: Invert All Bits

2	7	8	1
0010	0111	1000	0001

Two's: Add 1 to One's

2	7	8	2
0010	0111	1000	0010

1	1	1	1
D	8	7	E
+ 2 7 8 2			

1	0	0	0	0
--------------	---	---	---	---

Drop most significant bit
because we are doing
arithmetic mod 2^{16}

2'S COMPLEMENT: EXAMPLE W/ MOD 2^{16} ARITH

1 6 A F
0001 0110 1010 1111

Is this number
negative or positive?

Positive! Because
MSB = 0

One's: Invert All Bits

E 9 5 0
1110 1001 0101 0000

Two's: Add 1 to One's

E 9 5 1
1110 1001 0101 0001

1 1 1 1
1 6 A F
+ E 9 5 1

~~1~~ 0 0 0 0

Drop most significant bit
because we are doing
arithmetic mod 2^{16}
